

For Women

Given that the requirements for thickness, volume and length of hair between men and women are more for women than they are for men and the options for hairstyling vary, specified techniques for hair enrichment offer us more possibilities compared to remedial wigs, such as:

- Maintenance of the original image of hair
- Absolute solidity and full fitting, without the need for removal
- Natural result
- Options for more styles and hair dyeing
- Ability to perform all the individual's everyday routines

Eyebrow transplant

It is hard for one to imagine what an important part eyebrows play in one's facial image, until we see a person without eyebrows. Loss of eyebrows can make an individual feel very uncomfortable of his/her appearance. Eyebrow transplant can be performed in a similar way with scalp hair transplant. The result is natural since the to-be-transplanted hair is taken from the back of the scalp.

- Eyebrow loss can result from many reasons such as:
- Excessive removal of eyebrows with the use of tweezers, electrolysis or hair depilation with the use of laser.
- A wound caused by an accident or burn.
- Excessive and permanent make-up tattoos
- Systemic or identified ailment (thyroid or anemia)
- Medical or surgical treatments such as chemotherapy, radiation or surgical removal of tumors
- Hereditary causes
